

What Would the Rockefellers Do?

Infinite Banking Conversation Crib Sheet

Inspired by the wealth strategies often associated with the ■entity■['people', 'Rockefeller family', 'american business dynasty']■, this crib sheet highlights core principles behind private family banking concepts.

1. Control the Banking Function

- Keep capital within the family system.
- Borrow from policies instead of traditional banks when structured appropriately.
- Recapture interest that would otherwise leave your financial ecosystem.

2. Think in Generations, Not Years

- Design capital pools that outlive you.
- Use permanent life insurance for intergenerational wealth transfer.
- Build systems that compound over decades.

3. Protect Before You Grow

- Ensure liquidity at death to prevent forced asset sales.
- Use properly structured policies for tax-advantaged growth (jurisdiction dependent).
- Layer asset protection strategies where appropriate.

4. Leverage Without Liquidating

- Use policy loans to finance investments while keeping assets intact.
- Avoid interrupting compound growth unnecessarily.
- Maintain flexibility in capital access.

5. Educate the Next Generation

- Teach financial literacy early.
- Involve family members in structured capital discussions.
- Establish clear governance around family capital.

Reflection Questions

- Are we financing assets or consuming assets?
 - Who currently controls our access to capital?
 - Are we building a system or just buying products?
 - What does our liquidity plan look like at death?
